Alonzo:

These daily reports are not as accurate as I would expect.

1. In your email below, you indicate that "Lazarus has determined that no additional oil will be transferred from Tank 26 into Tank 30" but on the subsequent daily it shows that oil was transferred from Tank 26 to 30. If that was the case then the guys did nothing but travel to Nixon to get supplies.
2. I am not sure what exactly is intended to be accomplished by collecting liquid from Tank 26 for profiling on a foot by foot basis. Is this a visual evaluation or an analytical evaluation? I have the following questions:
  - a. Tank 26- Why can't you use a sludge judge to collect a representative sample and check it out visually to determine phasing in the contents. Additionally, the material could be spun to determine water content (%) just as is done by used oil facilities when they collect oil from their clients. A used oil facility needs to be called in to see if they can take the oil off your hands so you can move forward with everything else. I need to know the exact plan and a schedule to completion

Thanks

Subject: Falcon Refinery - EPA Daily Progress Report

---

Gary,

Please find attached the Daily Report for Wednesday December 12, 2012.

Lazarus has determined that no additional oil will be transferred from Tank 26 into Tank 30.

Additionally, the oil in Tank 26 is becoming more difficult to transfer.

9577423

I will be providing you with this weekly progress report a revised plan.

Moreover, Lazarus will be collecting, for profiling, liquids in Tank 26 on a foot-by-foot basis. This will be conducted this coming Monday (Dec 17, 2012). That information as well as the past measurements will enable Lazarus to evaluate and report to the EPA progress and remaining liquids in Tank 26.

If you have any questions or comments please do not hesitate to contact me at (361) 522-1935.

Sincerely,  
Alonzo
